

Powering CDMO Growth Through Partnership

Driving Compliance, Efficiency, and Growth Together

Enzene Inc., a fast-growing **contract development and manufacturing** organization (CDMO), has been scaling its U.S. operations at a rapid pace since late 2023. As one of the first employees on-site, Dawn Miller was responsible for **procurement, planning, supply chain, and warehousing** — all while the company was transitioning from start-up to full-scale manufacturing.

“We could not have done this without GenVault. From day one, their team has gone above and beyond to support us, managing a high volume of shipments, and helping us navigate GMP and FDA requirements. Their expertise, responsiveness, and true partnership mindset have made a lasting impact on Enzene.”

— Dawn Miller, Associate Director, Procurement & Planning Enzene Inc.

In the early stages, Enzene faced several pressing challenges:

- **High shipment volumes** — With operations ramping up, GenVault was receiving up to 20 shipments a day on Enzene's behalf.
- **Tight regulatory requirements** — As a GMP-compliant CDMO under FDA oversight, every shipment required strict chain-of-custody tracking and temperature control.
- **Start-Up Support** — With a lean team and a new U.S. facility, GenVault provided expert guidance on warehouse setup, temperature mapping, and cold-chain workflows to ensure smooth operations.

GenVault stepped in as a **true partner**. The team not only handled the **complex logistics** of receiving, storing, and managing critical materials but also provided **valuable operational insights**. By sharing best practices for compliant warehouse design and temperature monitoring, GenVault helped Enzene establish scalable internal processes from day one.

“ There was never a moment you weren't willing to help and that makes all the difference when you're starting up. ”

Today, Enzene continues to rely on GenVault's **secure infrastructure, compliance expertise, and responsive partnership** to safeguard sensitive materials, manage operational risk, and support their mission of delivering life-saving therapies.

Who is GenVault?

We are designed from the ground up to meet the highest standards of security and compliance for your sample needs. The GenVault facility offers stability chamber storage, 500,000+ cu.ft. of ambient and Controlled Room Temperature (CRT) storage, and a full, five-floor biorepository for refrigerated, frozen, and cryogenic storage.

GenVault has taken every precaution to ensure your materials are protected against temperature, humidity, fire, water, power loss, natural disasters, and even human error.

From our purpose-built infrastructure to our security and monitoring systems, GenVault is engineered for resilience and dependability.

REDEFINING THE BIOREPOSITORY EXPERIENCE

PRESERVATION

Critical asset storage and inventory management from ambient/CRT to ultra-low and cryogenic temperatures.

STABILITY

Controlled environment stability chamber for temperature, humidity, and light conditions for a variety of industries.

TRANSPORT

GenVault Transport Services (GTS) provides temperature-controlled shipping with compliant monitoring throughout the chain-of-custody.
